Springer Feb 1995, 1995. Taschenbuch. Book Condition: Neu. 235x191x17 mm. Neuware - The papers collected in this volume are contributions to T.I.Tech./K.E.S. Conference on Nonlinear and Convex Analysis in Economic Theory, which was held at Keio University, July 2-4, 1993. The conference was organized by Tokyo Institute of Technology (T. I. Tech.) and the Keio Economic Society (K. E. S.) , and supported by Nihon Keizai Shimbun Inc . A lot of economic problems can be formulated as constrained optimizations and equilibrations of their solutions. Nonlinear-convex analysis has been supplying economists with indispensable mathematical machineries for these problems arising in economic theory. Conversely, mathematicians working in this discipline of analysis have been stimulated by various mathematical difficulties raised by economic theories. Although our special emphasis was laid upon 'nonlinearity' and 'convexity' in relation with economic theories, we also incorporated stochastic aspects of financial economics in our project taking account of the remarkable rapid growth of this discipline during the last decade. The conference was designed to bring together those mathematicians who were seriously interested in getting new challenging stimuli from economic theories with those economists who were seeking for effective mathematical weapons for their researches. Thirty...

## Reviews

*It is one of the most popular books. I am quite late in starting to read this one, but better than never. Once you begin to read the book, it is extremely difficult to leave it before concluding.*

*This pdf can be worthy of a read through, and superior to others. It generally does not expense excessively. It has been printed in an exceptionally simple way and it is just soon after I finished reading this ebook in which in fact modified me, change the way I really believe.*
