

Introduction to the Galois Correspondence

Filesize: 2.89 MB

Reviews

It is a single of my personal favorite pdf. It really is written in basic words instead of hard to understand. Your daily life period will be transformed as soon as you complete looking over this pdf.

INTRODUCTION TO THE GALOIS CORRESPONDENCE

Springer-Verlag GmbH Apr 2013, 2013. Taschenbuch. Book Condition: Neu. 236x156x22 mm. Neuware - In this presentation of the Galois correspondence, modern theories of groups and fields are used to study problems, some of which date back to the ancient Greeks. The techniques used to solve these problems, rather than the solutions themselves, are of primary importance. The ancient Greeks were concerned with constructibility problems. For example, they tried to determine if it was possible, using straightedge and compass alone, to perform any of the following tasks (1) Double an arbitrary cube; in particular, construct a cube with volume twice that of the unit cube. (2) Trisect an arbitrary angle. (3) Square an arbitrary circle; in particular, construct a square with area $1r$. (4) Construct a regular polygon with n sides for $n \geq 2$. If we define a real number c to be constructible if, and only if, the point $(c, 0)$ can be constructed starting with the points $(0,0)$ and $(1,0)$, then we may show that the set of constructible numbers is a subfield of the field \mathbb{R} of real numbers containing the field \mathbb{Q} of rational numbers. Such a subfield is called an intermediate field of \mathbb{R} over \mathbb{Q} . We may thus gain insight into the constructibility problems by studying intermediate fields of \mathbb{R} over \mathbb{Q} . In chapter 4 we will show that (1) through (3) are not possible and we will determine necessary and sufficient conditions that the integer n must satisfy in order that a regular polygon with n sides be constructible. Englisch.
